## NMZK September output to reach peak for 2009

*Thursday, 27 Aug, 2009*

According to the Novosibirsk regional administration in September this year, Russian steelmaker Novosibirsk Metallurgical Works, named after Kuzmin, plans to reach its highest level of output since the beginning of the current year and to produce 17,364 tonnes of steel products including 14,193 tonnes of electric welded and shaped pipes and pipes for water and gas supply, and 3,170 tonnes of rolled steel products.

NMZK has resolved its problem of raw material supply shortage, which has been its main problem up to now. In August, about 17,000 tonnes of slabs will be delivered to NMZK by Evraz West-Siberian Steel Works and by Metalloinvest's subsidiary Ural Steel. Up to the end of the current month 4,800 tonnes of steel products will be manufactured at NMZK.

According to the Novosibirsk regional administration, the uninterrupted production activity of NMZK will be also ensured by the developed sales network of Russia's largest metal trader Metallservis Group.
