
Metso to supply crushing and screening system to Norsk Stein

Sunday, 18 Oct, 2009

Metso will supply a complete fine crushing and screening system to Norsk Stein's Jelsa quarry expansion in Norway. The delivery will be completed by June 2010. The value of the order is approximately EUR 27 million. The order is included in Mining and Construction Technology's Q3 orders received.

The order comprises of 4 gyratory cone crushers, 8 inclined screens, a stacker conveyor and a significant amount of conveyors. It also includes the engineering, erection and project management of the new plant.

The stationary plant expansion will raise the production of the Jelsa quarry significantly. The yearly production of the quarry now exceeds 5 million tonnes. After completing the expansion, the targeted production for fine products will be 850 tonnes per hour in addition to existing plant production 650 tonnes per hour and total production more than 10 million tonnes per year.
