## **Panggang makes strides in CRNGO development**

*Wednesday, 21 Oct, 2009*

It is reported that the technologists from Pangang finally improved the rate of qualified non oriented CR silicon steel to the normal level after two year research and trial production and concluded a series of patent technologies in producing the product.

Panggang officially started its development of non-oriented silicon steel since 2007. So far, the mill is able to produce many grades silicon steels in batches and now bending itself to the experimentation of 50PW600L and 50PW470L.

As per report, Panggang's non-oriented silicon steels have already been applied in many domestic house-hold appliance makers.
