
Punj Lloyd Group ventures into solar utility projects

Tuesday, 10 Nov, 2009

Punj Lloyd Group announced its launch into the solar utility space.

Punj Lloyd which has already established itself as one of the foremost process contractors in the design and construction of related renewable facilities namely biofuels will provide Solar Photovoltaics and Solar Thermal solutions with a strong emphasis on technology and providing application specific solutions.

Punj Lloyd Delta Renewables will develop, engineer and execute renewable energy based projects throughout the world. Acutely aware of the environmental and sustainability issues associated with the production of fuels and energy using conventional methods, and the growing global demand for alternative renewable sources, Punj Lloyd Delta Renewables will provide turnkey integrated development and sustainable solutions within the power, building and infrastructure sectors.

While initially focusing on Solar Energy, Punj Lloyd Delta Renewables will diversify into other forms of renewable energy like biomass and wind.

Mr Atul Punj chairman of Punj Lloyd Group stated that "It is logical for us as EPC leaders to partner with Delta Solar of Singapore, who are already established in India and are the chosen provider for solar lighting solutions for the Commonwealth Games Village. This initiative will enable us to address the immediate need for significant energy savings and clean energy sources globally."

Dr Tariq Alam CEO of Punj Lloyd Delta Renewables said that "The amalgamation of Punj Lloyd's global presence and management expertise and Delta Solar's comprehensive understanding of key applications, together with leading edge designs and technology provides the ideal foundation for us to become a dominant global force in the renewable energy sector."
