
Production pruning - ArcelorMittal to restart C6 BF at Cleveland

Friday, 18 Sep, 2009

It is reported that ArcelorMittal will restart its C6 blast furnace with 1.5 million short tonnes capacity in its flat products mill in Cleveland.

ArcelorMittal claimed that restarting the facility is geared to satisfying customer needs, and they are cautiously optimistic regarding the current market situation.

Meanwhile, ArcelorMittal also restarted its hot rolled machine, pickled production line and galvanized line. The company is also planning to restart another blast furnace at the beginning of October in Indiana.
