
WISCO annual output of HiB silicon steel exceeds 100000 tonne

Saturday, 09 Jan, 2010

Chinese steelmaker Wuhan Iron and Steel Corporation in 2009 produced more than 100000 tonne of HiB silicon steel, double the volume of 50,000 tonne for 2008, representing a new breakthrough in its output level of high-grade oriented silicon steel.

In recent years, WISCO has made great efforts in the development of large-scale production of HiB steel, a key material in the manufacture of large transformers, with its annual output of HiB steel growing to current levels from just 20,000 tonne in 2007.
