## **Sinarsky completes hot trials of new mill**

*Saturday, 23 Dec, 2006*

TMK's Sinarsky pipe plant has announced that its hot trial of the primary mill has been successfully completed in Tube mill workshop No 3 and that the new plant will allow the enterprise to use in its tube production uninterruptedly cast billets made at the Seversky Tube Works.

The primary mill, the capacity of which completely covers the Tube mill workshop No.3 demand for strained billets, was manufactured at the Electrostal'mash factory to SinTZ's special order.

Installation of the primary mill at the Sinarsky Pipe Plant was carried within the framework of TMK's Strategic investment program. The new equipment will allow SinTZ to increase production of uninterruptedly cast tube billets up to 70% as early as 2007.
