## **The Ferritic Solution from ISSF**

*Friday, 04 Jul, 2008*

The International Stainless Steel Forum has published several new brochures

Ferritic stainless steels share most of the mechanical and corrosion resistance properties of their more expensive cousins, austenitic stainless steels. However, unlike the austenitics, ferritic stainless steels contain no nickel. This makes them a cost-effective alternative in many applications.

The Ferritic Solution provides an overview of the properties of ferritic stainless steels, the advantages of using them and the applications where they can be used. The Ferritic Solution is a crucial reference document for stainless steel users, specifiers and producers.

Since the release of The Ferritic Solution in May 2007, the brochure has been translated into many. This brochure is available in Chinese, English, French, German, Italian, Hindi, Japanese, Korean, Portuguese, Spanish and Turkish.
