## **Chinese HDG exports to Middle East to increase**

*Wednesday, 30 Jul, 2008*

It is reported that amid weak domestic demand, China's steel mills and exporters have gradually lifted exports of GI and PPGI products to the Middle Eastern region.

Currently, the price of hot dip galvanized steel sheet to Middle East from China is much lower than that from Japan.

As per report China exported some 290,000 tonne of HGI to Middle East in 2007.

China's exports to Middle East of steel products, such as GI, PPGI, carbon steel plates and slabs, are expected to surge dramatically in September, because demand from Middle East for steel is comparatively higher than other regions.
