
LongTeng Speical Steel starts flat bulb line

Wednesday, 24 Sep, 2008

Jiangsu LongTeng Special Steel Co Limited has recently put its 850 continuous rolling production line into formal operation, which mainly focus on production of ship use sections like flat bulb steels and L bar, with annual capacity of 0.5 million tonnes.

Jiangsu LongTeng's steel branch factory professionally rolls flat bulb steels of various intensities and flat steel for ship use, and now in possession of one set of machine group production line of 580*4, 450*2, 300*5 respectively, with annual output capacity of 0.25 million tons. With the efforts in technical reform, the production lines of 580 and 850 were successfully put into operation, bringing annual output to 0.5 million tonnes.

It adopts the advanced equipment and processing technologies as well as other sophisticated detecting facilities, such as direct reading spectrograph, universal material testing machine, and impact machine to ensure the stable and reliable product quality. As a result, it has enjoyed products of complete specifications, steady product quality and reliable performance, with annual production capacity of over 1 million tonnes for various ship use sections.

Jiangsu LongTeng was accredited by the classification societies from CCS, ABS, GL, BV, RINA, NK, KR etc.
