
Sinarsky launches new pipe coating line

Tuesday, 20 Jan, 2009

It is reported that Sinarsky Pipe Plant included in the TMK Pipe Metallurgical Company in the framework of the Strategic Investment Program completed the first phase of construction of a new conservation area covering pipes in the Pipe-rolling shop 2.

As per report, the aim is to ensure the requirements of international quality standards to protect the pipes in the process of packing and transportation. The new complex consists of two razdatochnogo equipment, paint booths Venjakob and equipment for the reception of pipes under the package.

The experience of introducing such systems at other plants the company confirms the effectiveness of applying advanced methods of anticorrosive coatings

Mr Yuri Bodrov technical director of SinTZ said that a new line of equipment will help to significantly improve the performance of consumer and commercial type products.
