## Everest Industries ventures into PEB solutions

*Friday, 01 May, 2009*

Everest Industries Ltd, one of India's fastest growing building solutions companies, has ventured into Pre Engineered Building Solution an innovative concept in the infrastructure & industrial sector.

Pre-Engineered Building or PEB a new perception in construction business is the fastest systems of industrial construction today. After marveling into a complete range of building solutions Roofing, Ceilings, Walls, Flooring, Cladding, Doors, Pre-Engineered Building Solutions is another endeavor from Everest Industries for delivering strength, speed and safety to the Industrial, Commercial and Residential sector.

The new Pre Engineered Building Solution or PEB introduced by Everest Industries is the finest and fastest option for industrial construction purposes as they are 100% custom-built as per exact requirements of the consumer. Pre-Engineered Building or PEB is a structural steel framework of primary and secondary members like rigid frame, beams, purlins and girts, trusses, and columns on to which cladding and roofing components are attached, Pre-engineered buildings can be as unique as your needs. A computer-assisted design helps create a building for a specific use, whether it's a service station, retail outlet, manufacturing or office building.

As compared to the regular conventional building solutions, Everest Pre-Engineered Building Solutions are superior in strength and are corrosion resistance with protection against non uniform weathering and features an attractive appearance. Everest Pre-Engineered Building Solutions promise to erect the factory building in only 33% of the time that it normally takes to construct a conventional building.

All in all Everest Pre-Engineered Buildings or PEB is a technologically advanced building solution, proficient in every possible manner and certainly the future of infrastructural excellence.
